## High voltage pulse generator

Lightning Surge	1.2 / 50 $\mu$ s
Switching Voltage	10 / 700 $\mu$ s
Switching Current	5 / 350 $\mu$ s

### According to

**CCITT-K17/K20/K22**

**ITU-T/K44**

**IEC 61000-4-5**

**VDE 0847**

The high-voltage pulse generator PG 5-200/ 10-1000 creates standard impulse voltages with waveforms 1.2/50  $\mu$ s and 10/700  $\mu$ s. It is designed for dielectric testing of components and systems as well as testing of the electromagnetic compatibility of electronic systems and devices acc. to CCITT-K17/K20/K22, ITU-T/K44, IEC 61000-4-5 etc.

Output impulse voltage waveform can be selected:

- Lightning Surge with waveform 1.2/50  $\mu$ s acc. to IEC 60060
- Switching Voltage with waveform 10/700  $\mu$ s acc. to IEC 61000-4-5
- Switching Current with waveform 5/320  $\mu$ s acc. to IEC 61000-4-5

The peak value of the test voltage is continuously adjustable from 0.2kV/ 0.5kV to 5kV/ 10kV. Positive or negative polarity of output voltage can be selected. A built-in voltage divider 1000:1 allows monitoring of the impulse output waveform during testing.

The generator excels by its compact design, simple handling and precise reproducibility of test impulses. The generator uses maintenance-free semiconductor switches. It features a microprocessor controlled user interface and a 7" touch screen unit for ease of use. The microprocessor allows the user to execute either standard test routines or a "user defined" test sequence. A standard USB port provides the ability to print a summary of the test parameters as well as the results to an USB stick.

Moreover, all generator functions may be computer controlled.

The software program PG-REMOTE allows full remote control of the test generator via fiber optic Ethernet interface as well as documentation and evaluation of test results, accordingly to the IEC 17025. To record definite impulses, it is equipped with an Impulse Recording Function (IRF)

External coupling networks designed for testing telecom equipment with up to 8 ports are available.
